

Sustainable Exploitation of bio-based Compounds Revealed and Engineered from naTural sources

SECRETed is a H2020 project funded under the FNR-11-2020 topic, aiming to fully exploit aquatic biotechnology for the production of novel industrial products for the pharmaceutical, cosmetics, agrochemical, marine and chemistry sectors. The SECRETed project aims to develop novel molecules with tailor-made properties by the combination of biosynthetic genes of amphiphilic compounds (biosurfactants and siderophores) produced by marine and extremophilic microorganisms.
